Our „little miracle“ – your advantage!

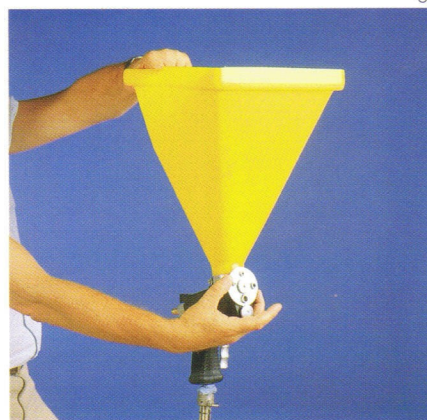

It's not without reason that our customers also call the Putzmeister hopper spray gun „the little miracle“.

What all had to be previously thrown on by hand with great effort, is now carried out with effortless ease by this machine. Your first attempts with it will be very successful. And craftsman's knowledge or experience is no longer required.

And even coarse dispersion plasters with grains up to 6 mm in size can be handled. Mineral based mortar,

Hopper spray gun can be quickly and easily disassembled (e.g. for cleaning).

By turning the nozzle disc you can change the spray orifice as quick as lightning.

fine-grained decorative plaster, fibrous compounds and stipple finishes as well as reinforcement pastes are all very suitable material. Dry, granular material such as mica can be sprayed onto soft plasters.

The Putzmeister „little miracle“ has proven itself thousand-fold both at home and abroad. It is easy to handle. The inside cross-sections are kept large. This guarantees a good through-flow even with coarse material.

Very little air is required. A spray gun compressor with 150-200 l/ min and 2-3 bar as sufficient. The Putzmeister 2-cylinder Handy compressor is sufficient for all spraying work. The size of the orifice can be changed as quick as lightning by turning the nozzle disc. Setting and changing of the spray structure is therefore carried out within seconds.

These advantages are for your benefit. You'll be very pleased when you see just how simple this gun is to handle. The type of spraying can be altered by regulating the air cock – to more or less movement of material draw (distance of the nozzle).

After letting go of the trigger, this then moves forward and stops material emerging at the nozzle. To refill the hopper, you do not have to cut off the air so you still have the same setting for spray structure for the next filling. For construction site mixes, especially for mineral plasters, you must make sure that mixing is thorough and that the material is always screened.

Ordering Data:

- Hopper spray gun, ready for operation, packed in box, **Part no. 207 307.001** consisting of:
 - 1 hopper gun
 - 1 air hose cpl. 10 m
 - 1 box
 - 1 x operating instructions and lists of spare parts

For individual orders:

- 1 hopper gun **Part no. 210 014.006**
- 1 air hose cpl. 10 m **Part no. 209 345.003**
- 1 stand **Part no. 206 766.009**

Compressors in our programme:

- PM V-Meko 2-cylinder compressor 360 l/ min, 230V/ 50 Hz **Part no. 205 768.008**
- 2-cylinder Handy compressor 250 l/ min, 230V/ 50 Hz **Part no. 000 215.002**

Technical Data

Air supply required	approx. 220 l/ min
Air pressure required	2-3 bar
Hopper volume	6 l
Weight	1,5 kg
Orifices	
4-hole	3, 5, 7 and 10 mm
9-hole	4, 5, 6, 7, 8, 9, 10, 11, 13 mm
Hopper material	made of sturdy plastic

■ Your Putzmeister Partner

- Mixer pumps, worm and piston pumps for plaster and mortar
- Conveyors for floor-screed
- Professional high-pressure cleaners
